

Zentara Robotics: Product & Operations Handbook

Version 4.2 · Effective 1 March 2026 · For internal RAG testing

About this document

Zentara Robotics is a fictional company invented for testing retrieval-augmented generation pipelines. Every name, number, and policy in this document is made up. The point is that the facts are distinctive enough that a working RAG system should be able to retrieve and answer questions about them accurately, and you can tell immediately whether the answer came from the document or was hallucinated.

Company snapshot

Founded	12 April 2017, in Tallinn, Estonia
Headquarters	Rotermanni 8, 10111 Tallinn
CEO	Iris Kallas
CTO	Bogdan Vr■biescu
Head of People	Yuki Tanabe-Pereira
Employees	287 (as of 1 March 2026)
Primary product	Magpie-7 autonomous warehouse picker
FY2025 revenue	€41.6 million
Reporting currency	Euro (EUR)

1. Magpie-7 product specifications

The Magpie-7 is Zentara's seventh-generation autonomous picker, released on 14 September 2025. It is designed for mixed-SKU warehouses with shelf heights up to 3.2 metres and aisles as narrow as 1.1 metres.

Specification	Value
Model designation	ZR-M7-2025
Mass (unladen)	84.5 kg
Maximum payload	22 kg per arm, 40 kg total
Top travel speed	2.4 m/s
Battery	Lithium iron phosphate, 1.8 kWh
Runtime per charge	9.5 hours typical, 6 hours peak
Charging time (0–80%)	42 minutes
Operating temperature	–5 °C to 40 °C
IP rating	IP54
Onboard compute	NVIDIA Jetson Orin NX, 16 GB
Vision	Quad RGB-D cameras + 2D lidar (Hokuyo UST-30LX)
Pick success rate	99.2% (verified across 1.2 M picks in pilot)
List price (EUR)	€68,400 per unit
Subscription option	€2,150 / month, 36-month term
Warranty	24 months parts and labour

The Magpie-7 firmware is built on ROS 2 Humble and ships with the Zentara Pick SDK version 3.4. Customers on the Enterprise plan receive firmware updates monthly; Standard plan customers receive them quarterly.

2. Pricing tiers and support

Zentara offers three commercial tiers. All tiers include the Magpie-7 hardware, basic onboarding, and access to the customer portal.

Tier	Monthly fee	Response SLA	Included picks / month
Starter	€1,200	Next business day	200,000
Standard	€2,150	4 hours	750,000
Enterprise	€4,800	1 hour, 24/7	Unlimited

Support contacts

Routine technical support is reached at support@zentara-robotics.example or +372 600 4421. Urgent incidents on the Enterprise tier are escalated via the 24/7 hotline at +372 600 4499. The escalation manager on call for Q1 2026 is Petra Lindqvist.

Refund policy

Hardware purchases may be returned within 30 days of delivery for a full refund, provided the unit shows no physical damage and fewer than 50 operating hours on the odometer. Subscription contracts may be cancelled with 60 days' notice; early termination incurs a fee equal to two months of the contracted rate.

3. Safety guidelines

The Magpie-7 is rated for collaborative operation under ISO 10218-2 and ISO/TS 15066. The following rules are mandatory for all sites:

- Operators must complete the 4-hour Zentara Safety Certification before working within 2 metres of an active unit.
- The emergency stop button (red, located on the rear panel) cuts power to all actuators within 250 milliseconds.
- Maximum permissible ambient noise during voice-command operation is 78 dB(A).
- Units must be inspected every 500 operating hours; the inspection checklist is form ZR-INSP-22.
- Lithium iron phosphate batteries must be disposed of via the Zentara return programme; landfill disposal is prohibited.

4. Frequently asked questions

Can the Magpie-7 work outdoors?

No. The IP54 rating protects against dust and splashing water but not against sustained rain or direct sunlight. Outdoor deployment voids the warranty.

What languages does the voice interface support?

As of firmware 3.4, the voice interface supports English, German, Estonian, Polish, and Japanese. Spanish and French are scheduled for firmware 3.6, expected in June 2026.

Is the SDK open-source?

The Zentara Pick SDK is source-available under the Zentara Community Licence 1.1, which permits non-commercial use and modification. Commercial use requires either a hardware purchase or an active subscription.

5. Company history (selected milestones)

2017	Zentara Robotics founded in Tallinn by Iris Kallas and Mart Õun.
2018	First prototype, Magpie-1, demonstrated at Hannover Messe.
2020	Series A funding of €8.4 million led by Northern Horizon Capital.
2022	Magpie-4 enters commercial deployment with retailer Voorhuis BV in the Netherlands.
2024	Series B funding of €31 million; opens R&D office in Kraków, Poland.
2025	Magpie-7 launches on 14 September; passes 1 million cumulative picks in pilot.
2026	Announced expansion into the DACH region with a sales office in Munich.

Office locations

Zentara operates from three offices: the headquarters in Tallinn, the R&D centre in Kraków (opened May 2024, 38 engineers), and a sales office in Munich (opened January 2026, 6 staff). All three offices share a common holiday calendar based on Estonian public holidays plus local additions.

Glossary

Pick	A single retrieval action: locating, grasping, and placing one item.
SKU	Stock-keeping unit; a unique identifier for a product variant.
MTBF	Mean time between failures; for Magpie-7, currently 4,200 hours.
ZCL 1.1	Zentara Community Licence, version 1.1, governing SDK use.
ZR-INSP-22	The standard 500-hour inspection checklist form.

End of document. Every fact in this handbook is fictional and exists solely so that a RAG system's answers can be checked against a known source of truth.
